In their own words

“Kenya therefore endeavors to abate her GHG emissions by 35% by 2035 relative to the BAU scenario of 215 MtCO2eq in 2035, leading to the abatement of 75.25 MtCO2eq. Subject to national circumstances, Kenya will mobilize domestic resources to realize 15.05 MtCO2eq (20% of the 75.25 MtCO2eq) of the emission reductions. The remaining 60.20 MtCO2eq (80% of the 75.25 MtCO2eq) of the emission reduction will be achieved through a combination of international support, including finance, investments, technology development and transfer, and capacity building, and participation in carbon markets.”

Third Generation NDC, NDC 3.0, p. 13
